## Summary

---

Software developer with 3 years of experience. I like owning a problem end to end from the data model, through the interface people actually use, to how it gets deployed and kept running rather than handing it over at the pull request. What I want to build next is larger: distributed backends that stay correct under load and across service boundaries, and the delivery infrastructure that lets a team ship safely and often.

## Technical Skills

---

- **Languages:** Java, Python, TypeScript / JavaScript, SQL
- **Backend:** Spring Boot, REST, gRPC
- **Databases:** PostgreSQL, MSSQL(stored procedures, views, functions), Redis
- **Frontend & DevOps:** Next.js, React, Tailwind CSS · Docker, Traefik, GitHub Actions, Kubernetes, Linux
- **AI:** LLM API integration (Anthropic), vector search with HNSW indexing, embedding models, RAG fundamentals

## Experience

---

### Rebul Group of Companies

Dec. 2023 – Present

#### Software Developer

Istanbul, Türkiye

- Designed and deployed containerized backend services with Docker, orchestrated on Kubernetes with independent deployment pipelines per service.
- Designs, develops and maintains production backend services using Java and Spring Boot.
- Owns backend services end-to-end, including implementation, deployment and operational reliability.
- Optimize database performance in PostgreSQL and MSSQL using indexing, materialized views, batching and query tuning; build stored procedures, views and functions for complex calculations and reporting.
- Uses AI-driven development approaches in daily software development processes.
- Actively utilizes AI-assisted coding tools such as Cloude to improve development efficiency.
- Build webhook-based marketplace integrations for order and logistics workflows across multiple e-commerce platforms.

### Argela Software and Information Technologies

Jul. 2023 – Aug. 2023

#### Software Developer Intern

Istanbul, Türkiye

- Built Python tooling to analyze and monitor a Kubernetes microservice system, using Redis for caching and pagination to reduce repeated database queries.
- Prototyped a channel data streaming pipeline for 5G devices, Go using goroutines and channels for concurrent throughput.

### Teknomina Informatics

Aug. 2022 – Sep. 2022

#### Web Developer Intern

Istanbul, Türkiye

- Developed RESTful backend services in Java Spring Boot following an MVC architecture, handling data persistence and query logic through JDBC.
- Rebuilt the company website frontend with React and responsive CSS layouts, consuming REST endpoints to render dynamic, interactive pages.

## Education

---

### Fırat University

Sep. 2019 – Sep. 2023

#### B.Sc. Computer Engineering

Elazığ, Türkiye
